

CASE STUDY

AVE Television Production at the Australian Open Beach Volleyball Championships

COMPANY

AVE Television Production

PROFILE

AVE Pty Ltd is an independent television video production company hired to cover the 2008 Australian Open Beach Volleyball Championships.

CHALLENGE

The outdoor, beach environment was unusual and presented additional challenges with little set up time and excessive wind noise.

SOLUTION

The system provided, consisted of a six channel master station which is fitted with an electret 'noise cancelling' gooseneck microphone and loudspeaker.

RESULTS

Peter Bell from AVE commented on the ease of setup, clarity of audio and overall ease of operation of the ASL system even under the torturous conditions that a beach side event can pose.

PROJECT

AVE Television Production required a new intercom system for the Australian Open Beach Volleyball Championships, taking place at Glenelg Beach, South Australia in March 2008. This event was broadcast live to over twenty countries around the world, including China and many European nations.

CHALLENGE

As it was a live broadcast, AVE required the most reliable system to ensure every component of their team could communicate between each other. The outdoor, beach environment was unusual and presented additional challenges with little set up time and excessive wind noise.

SOLUTION

The system provided, consisted of a six channel master station which is fitted with an electret 'noise cancelling' gooseneck microphone and loudspeaker. Supporting this was a combination of single channel and dual channel speaker stations, also fitted with the 'noise cancelling' microphones and loudspeakers, as well as numerous belt packs with HS2/D headsets.

The combination of these components facilitated smooth and reliable communication from the AVE Outside Broadcast (OB) van to all of the operational staff located at various areas around the event.

OUTCOME

Peter Bell from AVE commented on the ease of setup, clarity of audio and overall ease of operation of the ASL system even under the torturous conditions that a beach side event can pose.
